

The Restaurant at 1900

Location

Mission Woods, Kansas

Project Type

Restaurant

Having recently finished a complete renovation of the award-winning 1900 Building just a few years earlier, Jonkman Construction was called to revisit the property to add a modern dining experience. The new restaurant compliments the state of the art performance, gallery, and event spaces they were previously entrusted to construct.

The Restaurant at 1900 expands on the modernest design of The 1900 Building. Integrated into the entrance of The Restaurant are the same 1960's era "tulip" columns that are such a distinctive part of The 1900 Building's overall design. The Restaurant occupies 2,290 square feet of space and is capable of hosting over 120 guests. While planning for the project took over a year, construction took just four months to complete.
